
Giveaway: AllMyNotes Organizer V3.16 Deluxe For Free _VERIFIED_

Freeware & Giveaway: WordPress Theme [GIVEAWAY] v1.1 Free. & A step-by-step guide to how to get your free GMOS from Vladonai. My wife and I just upgraded to the Moto G5.. AllMyNotes Organizer is definitely worth checking out if you want a free.Environment Pakistan develops sound national policy to fight climate change KARACHI, Feb 26 - Pakistan's growing energy needs could soon trigger the development of a massive regional gas pipeline to link its two western provinces to the Indian Ocean, as its hard-pressed energy minister announced plans to construct a 400 megawatt (MW) solar park next to a coal-fired power plant at one of the world's largest coal-fired plants, to help meet its needs. During his visit to Islamabad yesterday to mark the end of his three-month visit to Germany, the minister, Waqar Ahmed Khan, said his country also wanted to expand its nuclear energy capacity. However, he told Pakistan's Dawn newspaper that the country remained committed to reducing its use of fossil fuels. "We must adhere to international climate change treaties," Khan said. "All our achievements must be graded according to the climate change aspect. We need to check if we are producing pollution in an environment which we cannot live in." Pakistan's increasing energy needs, coupled with the shrinking of its glaciers, have been pushing the country into ever increasing dependence on fossil fuel imports. The country hopes to build hydropower dams and link its western provinces to Pakistan's biggest coastal gas field, on the Arabian Sea, but major energy projects have been mired in debates over their environmental and public health impacts and rights over their resources. Only last week, the government shelved a plan for building two nuclear power plants in Sindh province as it considered a plan to involve a Russian company in the development of nuclear power. The government is also considering the possibility of developing an offshore gas field, after signing a deal to import liquefied natural gas (LNG) from Iran in the summer. Pakistan has long seen its southwestern province of Sindh as the largest prospective market for LNG, but industry officials have been lobbying for an offshore project, hoping to supply not only Sindh but also the rest of the country. The government has set an ambitious target of 5
